(a)
max(−1/2, 1/α − 1)
bounded fields (α = ∞)
random hoppings J_i = v^z
Pareto resistances
Pareto, asymptotic window L ≥ 4096
α > 2
α < 2
exponent of d = ‖φ_1 − cos πx‖
1/α (tail index of the resistance ρ)
(b)
degrades continuously
relaxation rate λ_1
slow-mode distortion d
close to diffusive
fitted exponent
1/α
